Capstone Project?

This is **one complete C++ Full Stack Project** that every student has to build individually.

The project is an **Online Shopping Website** similar to Amazon or Flipkart, but with limited features.

Project Name Example:

- ArunMart
- PriyaMart
- JohnMart
- MariaMart

Each student must use **their own name**.

What students are going to build?

A website where

- Sellers can add products
- Buyers can buy products
- Admin can manage everything

Example

Seller

↓

Adds Product

Buyer

↓

Search Product

↓

Add to Cart

↓

Checkout

↓

Order

Admin

↓

View Users

View Orders

Delete Products

Week 2

- Product Module
- Cart
- Checkout

Demo

Week 3

Seller Dashboard

Week 4

Admin Module

Week 5

Search
Order Status

Week 6
Reviews
Validation

Week 7
Security
Testing

Week 8
Deploy project online

Week 9–10
AI Chatbot
Documentation
Final Demo

What should students submit?
Each student must submit:

- ✅ GitHub Repository
- ✅ Complete Source Code
- ✅ SQL Database
- ✅ Live Website Link
- ✅ Project Report
- ✅ PPT
- ✅ Final Demo

Instructions You Can Give Your Students
Capstone Project Instructions

1. Each student must complete the project individually.
2. Name the project using your own name (e.g., ArunMart, PriyaMart).
3. Build a multi-seller e-commerce website using C++.
4. Complete all mandatory modules:

    - User Registration & Login
    - Seller Product Management
    - Buyer Shopping
    - Cart
    - Checkout
    - Order History
    - Admin Panel
    - Product Reviews
5. Upload your source code to GitHub regularly.
6. Follow the weekly milestones shared by the Placement Cell.
7. Deploy the application online before the final review.
8. AI Chatbot is compulsory for the final evaluation after all core features are completed.
